

INSTRUCTION MANUAL
**CSC SYS FENCE &
ADAPTER PLATE**

BENCHDOG TOOLS

WHAT'S IN THE KIT

1. 1000MM FENCE ◀
2. 625MM FENCE ◀
3. 330MM FENCE ◀
4. ADAPTOR PLATE ◀
5. FLAG STOP ◀
6. THUMBSCREWS WITH WASHER AND T-NUT ◀
7. MATERIAL SUPPORT PLATE WITH FIXINGS ◀
8. GUARD LIFTER (3D PRINTED) ◀

STEP 1

Remove the thumbscrew and fence that comes with the CSC SYS 50 table saw. Put the fence somewhere safe and keep the thumbscrew as you will need this later.

STEP 2

Using the two Stainless Steel Thumbscrews put one washer on both of these thumbscrews and thread this through the top or bottom holes of the adaptor plate making sure to secure this with T-Nuts on the other side of the adaptor plate.

STEP 3

Taking the adaptor plate, align up this against the mitre saw. Using the thumbscrew that is supplied with the CSC SYS, screw this the adaptor plate into position and making sure that this is nice and tight.

STEP 4

Slide the flag stop to the length you want your material size to be.

STEP 5

Next you need to set the height of the blade to be at a minimum of 36mm. This allows the fence to go through and return back.

STEP 6

You then want to make sure that you are 1mm away from the saw blade. This can be done using a 1mm set up block and putting the set up block up against the blade and the fence and then sliding the fence up against it, giving you the perfect distance away from the blade. Tighten up the thumbscrews on the adaptor plate and that is now set.

STEP 7

You can now use this to cut down your material to size.

STEP 1

For the 625mm and 1000mm Fence, you can slide the material support plate on the underside of the extrusion and screw them into place using the attached thumbscrews. This is for when the material you are using is large / long to stop the material from tipping.

STEP 2

Place the material on top of the support plate and you can adjust the thumbscrew underneath if you need to align and level the material out.

STEP 1

Slide on the guard lifter to the end of the fence that is near to the cutting blade and this will allow you to glide this through the safety guard without any snagging.

STEP 2

You can now set your blade to be at any height and it shouldn't be an issue anything above 36mm.
